PROGRESS IN CLINICAL CANCER —Vol. IV

Edited by

IRVING M. ARIEL, M.D., F.A.C.S

Associate Clinical Professor of Surgery and Attending Surgeon, New York Medical College, Flower and Fifth Avenue Hospitals; Attending Surgeon, Pack Medical Group, New York, N. Y.

The aim of this series, which began in 1965, is to lessen the physician's task in keeping abreast of the latest developments in cancer research. Volume IV, the latest in the series, contains 29 chapters by 62 contributors who reveal some of the most exciting discoveries of the past three years.

Section Headings: General Considerations—Diagnosis—Lung Cancer—Irradiation—Specific Tumors—Index.

1970 7x10 424 pp. illus. \$29.75

From reviews of previous volumes: "The text provides much useful information for the investigator and clinician . . . a valuable reference on diagnosing and treating cancer."—*Postgrad. Med.* ". . . a significant effort to update practical information which is directly applicable to cancer control."—*Surg., Gynec. & Obstet.*

Vol. I, 1965 7x10 789 pp. 302 illus. \$39.50

Vol. II, 1966 7x10 392 pp. 179 illus. \$18.00

Vol. III, 1967 7x10 369 pp. 214 illus. \$21.00

CANCER CHEMOTHERAPY Basic and Clinical Applications

A Hahnemann Symposium

Edited by

ISADORE BRODSKY, M.D.

S. BENHAM KAHN, M.D.

and JOHN H. MOYER, M.D.

In review: "... is one of the better compilations of current information, carefully oriented to the practicing physician although it does contain discussions of more theoretical or 'basic' aspects as well."—*Amer. J. of Med. Sci.*

1967 7x10 360 pp. 102 illus. \$21.00

CLINICAL CARDIOPULMONARY PHYSIOLOGY

—3rd Edition, Revised and Enlarged

Edited by

BURGESS L. GORDON, M.D.

Visiting Professor of Medicine, Jefferson Medical College.

RICHARD A. CARLETON, M.D.

Professor of Medicine, University of Illinois; Director, Cardio-Respiratory Section, Presbyterian-St. Luke's Hospital.

L. PENFIELD FABER, M.D.

Clinical Associate Professor of Surgery, University of Illinois.

Sponsored by the American College of Chest Physicians. Written by authors who are recognized experts in their fields, the new 3rd Edition serves to reflect the changing patterns and concepts of cardiac pulmonary disease, while at the same time successfully bridges the gap between basic research and clinical practice. The book is divided into two sections, Cardiovascular Physiology and Pulmonary Physiology with well over twenty chapters in each section. The reader will find this book comprehensive, authoritative, and timely. Its appeal and usefulness will be to all physicians who deal with clinical problems presented by diseases of the chest.

From reviews of the 2nd Edition: "A monumental book that should be invaluable to the internist and medical student as well as to specialists in diseases of the heart and lungs." —*J.A.M.A.* "This book is the best single source of this type of information that is known to this reviewer." —*Annals. Int. Med.*

1969 7¾x10¾ 768 pp. 357 illus. \$45.00

PRE- AND POSTOPERATIVE MANAGEMENT OF THE CARDIOPULMONARY PATIENT

The 19th Hahnemann Symposium

Edited by

WILBUR W. OAKS, M.D.

Professor of Medicine, Head of Section of General Medicine, and Director of Continuing Education, Hahnemann Medical College and Hospital, Philadelphia, Pennsylvania.

JOHN H. MOYER, M.D.

Professor and Chairman, Department of Medicine, Hahnemann Medical College and Hospital, Philadelphia, Pennsylvania.

The basic science background is presented for both pulmonary and cardiology areas, so that the pathophysiology involved in clinical situations may be better understood. The cardiology portions of the book are primarily concerned with metabolic abnormalities in congestive heart failure and the physiologic background of arrhythmias.

From the Preface: "With the rapid advances made in surgery during the last several years, particularly in the cardiopulmonary area, numerous medical problems confront both internist and surgeon. Our aim in conducting the Nineteenth Symposium of the Department of Medicine, Hahnemann Medical College and Hospital, was to provide the clinician with a source of authoritative and specific advice on the proper management of those situations he may face when cardiac or pulmonary disease complicates the therapy."

1970 7x10 424 pp. 145 illus. \$24.75

endocrinology metabolism & gastroenterology

PROGRESS IN GASTROENTEROLOGY —Vol. II

Edited by

GEORGE B. JERZY GLASS, M.D.

Professor of Medicine and Chief, Section of Gastroenterology and Gastroenterology Research Laboratories, Department of Medicine, New York Medical College.

The second volume of this relatively new but already highly acclaimed series is now in the final stages of production and scheduled to be released in Spring, 1970. As in the first volume, the editor concentrates on providing extensive information on selective topics that have not been treated elsewhere rather than attempting to review the entire field. Appearing in the first section of the book are several timely articles on gastric secretion and related disorders. Presented in Part II are papers on Ammonia Metabolism in the Gastrointestinal Tract and Digestive Factors in Iron Absorption. Highlighted in the concluding third section are papers dealing with Primary and Secondary Disaccharidases Deficiencies, Cancer of the Body and Tail of the Pancreas, and the Role of the Intensive Care Unit in Clinical Gastroenterology.

In review of Volume I: "This volume should be useful to internists, gastroenterologists, and others striving to keep abreast of progress in gastroenterology. The excellence with which this volume has been presented makes me look forward to volume 2 and the continuation of this series . . ."—*J.A.M.A.*

Vol. II, 1970 In press

Vol. I, 1968 7x10 528 pp. 200 illus. \$29.50

CLINICAL ENDOCRINOLOGY —Vol. II

Edited by

EDWIN B. ASTWOOD, M.D.

and **CARL E. CASSIDY, M.D.**

"The strength of the book lies in the excellence of the many contributors. It would be hard to imagine a book with more outstanding people in a field discussing the particular topics of their interest . . ."

—*Amer. J. Med Sci.*

"This book is a delight."—*J.A.M.A.*

Vol. II, 1968 6x9 864 pp. 230 illus. \$32.00

6 *endocrinology / metabolism / gastroenterology***PROGRESS IN LIVER DISEASES** —Vol. III now available!

Edited by

HANS POPPER, M.D., Ph.D.

Given Foundation Professor, and Chairman of the Department of Pathology, Mount Sinai School of Medicine of the City University of New York.

FENTON SCHAFFNER, M.D., M.S.

Professor of Pathology and Medicine, Mount Sinai School of Medicine of the City of New York.

Volume III of this valuable series continues in the purpose of providing informative and comprehensible articles on the current status of knowledge and investigation in the field. Each chapter, by an eminent authority in the area, concerns itself with particular aspects of liver structure, function and dysfunction. Discussed and illuminated is the work being done in viral hepatitis and in anicteric hepatitis. Also examined is the assistance given to the failing but regenerating liver by extra-corporal devices. Subjects of some of the other thirty chapters in this volume are the influence of hormones on hepatic function, vitamin B₁₂ and the liver, traumatic liver diseases, and liver transplantation. The 51 contributors represent the internationally recognized leaders in liver research. The material is well-written and presented in a balanced fashion, delineating the progress made, the problems faced, and prospects for the future.

In reviewing Volume II the *Annals of Internal Medicine* says, "This scholarly series has been invaluable to all interested in the liver . . . the periodic compilation of critical essays on a wide variety of clinical and research liver-centered subjects serves a remarkably useful function. Volume II sets new standards of excellence and style."

AUTOGENIC THERAPY

A six-volume series

Edited by

WOLFGANG LUTHE, M.D.

Each volume covers a specific area of autogenic therapy. Volumes I through IV cover areas of application and research very closely linked to autogenic standard training. Volumes V and VI provide information primarily related to autogenic neutralization. Relevant clinical examples and cross references are found in all volumes. Special features include a 32-page Glossary of Terms used in autogenic training and therapy, individual Author and Subject Indexes for each volume, charts, tables, photographs and substantial use of illustrative case material for training and treatment purposes.

The complete series, now in press, will incorporate all available knowledge concerning clinically and experimentally oriented observations, and will include new approaches, new fields of medical application, increasing use of non-clinical areas, new theoretical perspectives, modifications of hitherto accepted views and procedures,

along with many stimulating hypotheses. This is a major contribution to the literature of therapy, and should be read by all who desire both a thorough study of the topic as well as a workbook for the direct application of these methods. It is a highly practical text for all medical men interested in psychosomatic medicine.

Vol. I: AUTOGENIC METHODS

A BIOGRAPHICAL HISTORY OF MEDICINE

Excerpts and Essays

By JOHN H. TALBOTT, M.D.

*Director, Division of Scientific Publications, American Medical Association;
Editor, Journal of the American Medical Association.*

Highlighted in this monumental new work of over 1,300 pages is biographical data on over 500 pioneers in medical history. The lives and scientific contributions of such personalities as Asclepius, Virchow, Harvey, Roentgen, Mayo and Lister are presented in the author's glittering literary style. This book will be a valuable reference as well as a source of informative reading for all those interested in medical history.

1970 In Press

SCIENTIFIC BASIS OF DRUG DEPENDENCE

Edited by

HANNAH STEINBERG, Ph.D.

Department of Pharmacology, University College, London.

This newly published book is the result of a recently held British symposium sponsored by the Biological Council Coordinating Committee for Symposia on Drug Action. The papers presented demonstrate how scientists of many disciplines are tackling various problems relating to drug dependency. The discussions range from the by-no-means-straightforward matter of definitions and general principles to laboratory experiments and clinical and social factors.

Opiates, the traditional drugs of dependence, have been joined by a host of others, including alcohol. These drugs differ greatly in their pharmacological properties, and scientists are still far from knowing the extent that these properties are responsible for dependence and how far explanations must be sought elsewhere. There is, however, substantial evidence to suggest a scientific basis. A good deal of evidence is presented and discussed in this volume.

1969 448 pp. 60 illus. \$13.75

PSYCHEDELIC DRUGS

Edited by

RICHARD E. HICKS, M.D.

Assistant Professor of Psychiatry and Assistant Director of Psychiatric Education, Hahnemann Medical College and Hospital.

PAUL JAY FINK, M.D.

Associate Professor of Psychiatry and Director of Psychiatric Education, Hahnemann Medical College and Hospital.

Consulting Editor:

VAN BUREN O. HAMMETT, M.D.

Professor and Chairman, Department of Psychiatry, Hahnemann Medical College and Hospital.

A comprehensive and multidisciplinary overview of psychedelic drugs—this new volume contains the papers and discussions of a symposium sponsored by the Department of Psychiatry of the Hahnemann Medical College of Philadelphia. The presentations represent a cross-sectional view of the current state of knowledge and opinion about these drugs, the people who use them, and the people who react for or against those who use them. They also offer a view of the current state of research into the possible therapeutic uses of psychedelic drugs. They provide a comprehensive look at the legal questions which must be considered, and at the philosophical and practical problems involved in the search for acceptable, legal solutions. This book can be read with benefit by anyone interested in the study of society and of human nature. More importantly, it will prove an informative and practical guide for the mental health professional, physician, psychiatrist, educator, and social worker.

10 *general medicine***HEALTH PROBLEMS IN
DEVELOPING STATES**

Proceedings of the Fourth Rehovoth
Conference

Edited by

MOSHE PRYWES, M.D.
and **A. MICHAEL DAVIES, M.D.**

This volume contains the proceedings of a conference which brought together leading statesmen and scientists from thirty-five nations. The discussions focused on the manifold problems of health in developing countries. Plenary sessions were devoted to priorities in health services, health and manpower, population control, tropical diseases, nutrition, and urbanization. Subcommittees centered their discussions on such problems as health in a changing society and the recruitment and training of health personnel. In addition to the interchanges between some of the world's foremost experts on these problems, this book offers the reader an informative and representative insight into the practical approaches being taken for the world-wide improvement of health.

PROGRESS IN MEDICAL GENETICS

—Vol. VII now available

Edited by

ARTHUR G. STEINBERG, Ph.D.

Professor of Biology and Associate Professor of Human Genetics, Western Reserve University.

ALEXANDER G. BEARN, M.D.

Professor and Chairman of the Department of Medicine, Cornell University Medical College, and Physician-in-Chief, The New York Hospital.

During the past decade the editors of this highly acclaimed series have concentrated on providing a collection of highly selective and detailed reviews rather than a comprehensive survey of all new developments in this rapidly growing branch of medicine.

From reviews of previous editions: "... an excellent summary of recent information ... holds a great deal for the basic scientist as well as for the practitioners of medicine and pediatrics."—*Arch. Int. Med.*

"... a diverse and instructive collection of papers ... can be highly recommended for both the medical geneticist and the interested clinician."—*J.A.M.A.* It is confidently anticipated that Vol. VII will live up to the standards of previous volumes.

Contents of Volume VII: Foreword—Hybridization of Mammalian Somatic Cells—Phenylketonuria and its Variants—Inherited Abnormalities of the Complement System in Man—The *Pi* System—Genetic Aspects of Renal Disease—The Haptoglobins—Legal Aspects of Genetic Counseling—Index.

PHYSICAL DIAGNOSIS IN CARDIOVASCULAR DISEASE

Edited by

CHARLES K. FRIEDBERG, M.D.

Physical diagnosis has long been established as one of the staple, routine modalities in the conventional approach to a definitive clinical diagnosis. But it acquired a new dimension of importance and a renaissance of medical interest with the advent and subsequent widespread use of cardiac catheterization and cardiac surgery.

Several of the contributors to this volume have been responsible in large measure, for this increased attention and understanding of the visual, palpable and auditory expression of specific cardiovascular disturbances in function.

Reprinted from "*Progress in Cardiovascular Diseases*,"

1969 6 $\frac{7}{8}$ x10 369 pp. illus. \$13.75

CURRENT STATUS OF DRUGS IN CARDIOVASCULAR DISEASE

Edited by

CHARLES K. FRIEDBERG, M.D.

The introduction of a wealth of new drugs and improved understanding of old ones have vied with advances in cardiac surgery and electronic devices to control the cardiac rhythm in promoting effective therapy.

Examined here are the mechanism of action, dosage, side-effects, indications for the choice of individual drugs or combinations of drugs, and changes in dosage and drugs necessitated by the clinical response. Certain specific drugs, which have been newly employed in recent years, or old drugs, used with increasing frequency or in new circumstances, are discussed in individual chapters.

1969 6 $\frac{7}{8}$ x10 272 pp. illus. \$9.75

**ACUTE MYOCARDIAL INFARCTION
AND CORONARY CARE UNITS**

Edited by

CHARLES K. FRIEDBERG, M.D.

The development of coronary care units for the treatment of acute myocardial infarction and the consequent reduction in mortality from this disease may be regarded as the outstanding therapeutic achievement of the past few years, when measured by the number of lives saved.

This book consists of 17 authoritative and often critical chapters, each systematically dealing with recent progress and understanding of some major aspect of acute myocardial infarction, with special emphasis on the management of this disease in a coronary care unit.

1969 6 $\frac{7}{8}$ x10 296 pp. illus. \$9.75**CLINICAL AIDS IN
CARDIAC DIAGNOSIS**By **WILLIAM DRESSLER, M.D.**

This timely new book by a noted cardiologist presents a broad discussion of the various clinical methods used in cardiac diagnosis. Its aim is to discuss examples of successful application of clinical methods, including those which have not as yet become widely practiced. Strong emphasis is placed upon personal bedside examination, although due attention is given to the role laboratory medicine plays in diagnosis.

1970 7x10 256 pp. 148 illus. \$12.75

CARDIAC REHABILITATIONBy **LENORE R. ZOHMAN, M.D.**
and **JEROME S. TOBIS, M.D.**

Tentative contents: Introduction—Medical Determinants of Cardiac Rehabilitation—Emotions and Cardiac Disease—Energy Cost—Cardiac Output—Electrocardiographic Monitoring—Physical Work Capacity—Comprehensive Work Evaluation—Work Evaluation Units—Disability Evaluation—The Process of Cardiac Rehabilitation—The Role of the Team in Cardiac Rehabilitation.

**THERAPEUTIC ADVANCES IN THE
PRACTICE OF CARDIOLOGY**

Edited by

CHARLES P. BAILEY, M.D.

Director of Thoracic and Cardiovascular Surgery, St. Barnabas Hospital, New York, N.Y.

SEYMOUR GOLLUB, M.D.

Director of Hematology, St. Barnabas Hospital.

A. GERALD SHAPIRO, M.D.

Director of Anesthesiology, Knickerbocker Hospital, New York, N.Y.

This book is tailored to the requirements and inclinations of physicians practicing cardiology, either medical or surgical; it addresses itself to the newest therapeutic advances in the field, with respect to "where we have been, what are we doing, and what discoveries are on the horizon."

1970 6 $\frac{5}{8}$ x9 $\frac{3}{8}$ 496 pp. 201 illus. \$22.50**THE HYPERTENSIVE
VASCULAR CRISIS****An Experimental Study**By **F. P. BYROM, M.D., F.R.C.P., F.R.A.C.P.**

Member of the External Scientific Staff of the Medical Research Council.

This exciting new monograph, authorized by a noted British physician, is an entirely original account of an experimental study of the subject.

1969 5 $\frac{1}{2}$ x8 $\frac{1}{2}$ 144 pp. \$4.75**HIGH BLOOD PRESSURE**

—2nd Edition

By **GEORGE PICKERING, K.t.,**
F.R.S., M.D., F.R.C.P.

Regius Professor of Medicine, University of Oxford.

"This book is not simply a rewarming of the first edition but is a major revision and updating . . . Pickering once more demonstrates his mastery of hypertension. It is an exceptionally well-balanced book, well grounded in the basic sciences and comprehensive as well as interesting and readable." —*J.A.M.A.*

DIGITALIS

Edited by

CHARLES FISCH, M.D.

Professor of Medicine and Director Cardiovascular Division, Indiana University School of Medicine.

BORYS SURAWICZ, M.D.

Professor of Medicine and Chief Cardiovascular Section, University of Kentucky College of Medicine, Lexington.

This monograph provides a multidisciplinary approach to the mechanism of action of digitalis and the clinical correlates of its diverse effects and complexities. It should be useful to the clinician as it discusses in specific fashion the effects and complications which may arise from the use of the drug. An extensive bibliography is included.

MORPHOLOGY OF THE BLOOD AND MARROW IN CLINICAL PRACTICE

By **RICHARD T. SILVER, M.D., F.A.C.P.**

*Associate Professor of Clinical Medicine,
Cornell University Medical College; As-
sociate Attending Physician, The New
York Hospital.*

Designed primarily for those who are clinically oriented, this striking new book provides not only a description of the microscopic observations in various hematologic conditions but also a consideration of their clinical implications and, from a morphologic standpoint, their significance in differential diagnosis.

HEMOPOIETIC CELLULAR PROLIFERATION

Edited by

FREDERICK STOHLMAN, JR., M.D.

*Director of Medicine and Research, St.
Elizabeth's Hospital; Professor of Medi-
cine, Tufts University Medical School,
Boston, Mass.*

Expected to be published in mid-1970, this book contains the edited proceedings of a conference held in Boston during December, 1969 as a part of the Centennial Celebration of St. Elizabeth's Hospital. The conference participants include the leading researchers in this field, and their presentations report and clarify the most recent advances and reflect the latest knowledge concerning hemopoietic cellular proliferation.

Whitby & Britton's DISORDERS OF THE BLOOD

—10th Edition

By **C. J. C. BRITTON, M.D.**

The long-awaited 10th edition of Whitby and Britton's classical text is now available. Writing in his preface, C. J. C. Britton says, "the vast amount of research carried out in hematology during the six years since the last edition has necessitated considerable re-writing and deletion of much of the old text. There has been much more new material added than in any previous edition."

1969 6x9 $\frac{1}{2}$ 820 pp. illus. \$19.75

CLINICAL IMMUNOLOGY AND ALLERGY —2nd Edition

By LEO H. CRIEP, M.D.

Clinical Associate Professor of Medicine (Emeritus), School of Medicine, University of Pittsburgh; Director, Clinical Immunology Laboratory, Veterans Hospital; Consultant, Presbyterian-University and Montefiore Hospitals

The rapid advances in the field of allergy and clinical immunology since the appearance of the first edition have made a second edition imperative. The book is divided into two parts. In part I are presented the biochemical nature of antigen and antibody; antibody detection techniques; normal and abnormal immunoglobulins; the morphology of antigen-antibody reactions; the role of the thymus; the antibody deficiency syndromes; transplantation immunity; and autoimmunity. Allergy to drugs, hormones,

insects and intestinal parasites, pulmonary function, spirometry, acid-base disturbances, non-atopic sensitivity diseases of the lungs, immunohematology and immuno-proliferative diseases are presented in part II.

Pediatric allergy is covered in detail, including immunization procedures, differential diagnosis of bronchial asthma and atopic dermatitis, the rehabilitation of the asthmatic child, "cot" death, etc.

Clinical allergic conditions are considered under each of the four separate divisions of part II: reactions and diseases of immediate hypersensitivity; reaction and diseases of delayed hypersensitivity; auto-immune reactions, and other diseases with similarities to immunologic reactions. This volume is both a fundamental textbook and a comprehensive work of reference. The bibliography is extensive.

MOTOR NEURON DISEASES

Research on Amyotrophic Lateral
Sclerosis and Related Disorders
Edited by

FORBES H. NORRIS, JR., M.D.

*Institute of Neurological Sciences, Pacific
Medical Center, San Francisco*

LEONARD T. KURLAND, M.D.

*Section of Medical Statistics, Epidemiology
and Population Genetics, The Mayo
Clinic and Mayo Foundation, Rochester,
Minn.*

To the best of the publishers' and editors' knowledge, this is the first book in modern times to exclusively cover this type of disease. Written by leading authorities in the field, these papers present clearly and incisively the latest clinical findings and investigations on the various aspects of the disorder. The thirty-eight papers presented give heavy emphasis to epidemiology, pathology, histochemistry, and detailed consideration to diseases related to amyotrophic lateral sclerosis in animals and man. This new volume should prove helpful to neurologists, neuropathologists, and virologists.

nuclear medicine

DIAGNOSTIC NUCLEAR MEDICINE

By **EDWARD R. POWSNER, M.D.**
and **DAVID E. RAESIDE, M.D.**

This new volume is derived from a course taught by the authors on the diagnostic applications of radioisotopes at Wayne State University School of Medicine. It is primarily intended to serve as an introduction for residents in radiology, pathology, and medicine, but is also expected to serve as a useful review for the practitioner and technician.

The text begins with a review of physics, instrumentation, radiation biology, and counting statistics. Discussions of radiation safety and radiation dosimetry are presented next. Following this are step-by-step descriptions of commonly used diagnostic tests, an introductory chapter on scanning, and concluding chapters on the autoradiography of tissue sections and vitro radioassays. A bibliography is included.

PROGRESS IN ATOMIC MEDICINE

By **JOHN H. LAWRENCE,**
M.D., D.Sc., F.A.C.P.

Director, Donner Laboratory and Donner Pavillion, University of California, Berkeley

Vol. I, 1965 6x9 233 pp. 40 illus. \$10.75

Vol. II, 1968 6x9 288 pp. 51 illus. \$12.75

RADIOACTIVE ISOTOPES IN THE LOCALIZATION OF TUMORS

Editorial Committee:

V. R. McCREADY, D. M. TAYLOR,
N. G. TROTT, C. B. CAMERON,
E. O. FIELD, R. J. FRENCH
and **R. P. PARKER.**

This new work incorporates the reports given at an International Nuclear Medicine Symposium, held in London and organized by the Institute of Cancer Research in association with the Royal Marsden Hospital. Leading international workers in the field present their findings and evaluate the performance of radiation detectors and the new radiopharmaceuticals. Emphasis is placed on clinical aspects—the significance and application of new work to diagnosis and treatment.

The first section of the book is devoted to the physical aspects, describing the various instrumentation, systems, and the results now being achieved. The second section is concerned with radioactive materials in the investigation of tumours. The last and main part of the book examines the clinical aspects with chapters on thyroid and parathyroid, bone, soft tissues, and brain tumours.

SUBNORMAL VISION

A Teaching Manual—Clinical
Experience with Adults and Children

Edited by

ELEANOR E. FAYE, M.D., F.A.C.S.

*Attending Surgeon, Manhattan Eye and
Ear Hospital; Medical Director, Low
Vision Service*

From the preface—"The clinical experience outlined in this book has been provided by thousands of sub-normal vision patients who have repeatedly demonstrated how strongly the partially-sighted person considers himself to be sighted, how long the visual mechanism continues to work under adverse conditions, and how much we must respect the importance of using partial sight."

The book, throughout which clinical experience is stressed, is divided into four sections. Section I is devoted to defining the patient in his unique setting as a visually-impaired person. It establishes the boundaries and contents of the subject, defines the handicap, and presents an effective approach to the clinical examination. Section II introduces the adult history, prescription and follow-up evaluation. Described in Section III is the child with partial sight stressing such areas which differ from the adult as parental concern, genetic implications, and educational problems. The effects of the significant role of brain injury is considered in detail. Section IV describes and explains the importance of the behind the scenes source material such as references, statistics, the essential lists of equipment suppliers and detailed instruction in setting up a clinic.

OPHTHALMIC PLASTIC SURGERY—4th Edition

By SIDNEY A. FOX,
M.S. (Ophth.), M.D., F.A.C.S.

*Clinical Professor of Ophthalmology,
New York University School of Medicine;
Visiting Ophthalmologist, Bellevue
Hospital; Consultant Ophthalmologist,
Bronx V. A. Hospital, Goldwater Memorial
Hospital and Hospital for Joint Diseases
and Medical Center*

Since the last edition of this book was prepared there has been a steady and significant evolution in the methods of lid repair. When looked at singularly these advances are not particularly startling but the cumulative result is indeed dramatic. Because of this, Fox's 4th edition has been entirely revised. Although some of the old material has been retained, much was deleted, and much more added. As with the past editions, this book is directed at the practicing ophthalmologist rather than the surgical specialist. It is confidently anticipated the new edition will fulfill their highest expectations.

OSTEOPOROSIS

Edited by **URIEL S. BARZEL, M.D.**

Metabolic Endocrine Laboratory, Montefiore Hospital and Endocrine Laboratory, Bronx, N.Y.

This book contains the edited transcript of The First International Symposium on Osteoporosis, held at Montefiore Hospital, Bronx, N.Y., during June, 1969. Although it is not primarily intended to serve as a textbook, it is hoped that it may provide a cornerstone from which future research in the prevention and treatment of osteoporosis will develop.

pathology and immuno- pathology

PROGRESS IN CLINICAL PATHOLOGY

A Review of Recent Advances in the Field of Clinical Pathology

—Vols. II and III now available!

Edited by

MARIO STEFANINI, M.D., F.A.C.P.

It is the purpose of this series to present a variety of topics which have either undergone significant changes or which, by being controversial, offer a challenge of understanding and interpretation. These volumes are designed to help fill the need for easily accessible, up-to-date information in the fields of basic sciences, instrumentation and methodology, as affecting Clinical Pathology. Volume I in review: "Excellent and extensive summarization and discussion . . . It is apparent that the best way to keep our knowledge and practice up-to-date is to have such books which concisely summarize and review the latest information in different subdivisions of clinical pathology as this first volume of 'Progress in Clinical Pathology'. It is to be hoped that future issues of this series will be equally outstanding."—*Arch. of Path.*

VOLUME II

1969 6 $\frac{7}{8}$ x10 392 pp. illus. \$19.50

Volume II—Contents: Selected Topics in Toxicology—Emergency Toxicologic Investigation and Bacterial Food Poisoning—Diagnostic Virology—Immunology of Leukocytes—Immunology of Platelets—Methods Used in Platelet and Leukocyte Immunology—Safe and Effective Transfusions—Syphilis Serology Today—Clinicopathologic Aspects of Lipid Maldigestion and Malabsorption—Abnormal Hemoglobins—Respiratory and Blood Gas Analysis—Pregnancy Tests and Their Evaluation.

TEXTBOOK OF IMMUNOPATHOLOGY

In two volumes

Edited by **PETER A. MIESCHER, M.D.**

Professor of Hematology, Head, Division of Hematology, University Hospital, Geneva, Switzerland; formerly Professor of Medicine and Head, Division of Hematology, New York University School of Medicine

HANS J. MUELLER-EBERHARD, M.D.

Scripps Clinic and Research Foundation, Department of Experimental Pathology, La Jolla, California, and Professor of Pathology, University of California at San Diego

The purpose of this textbook is to give a critical review of immunopathology with the primary emphasis on topics relevant to human disease and which are therefore of particular interest to clinicians.

The first volume, dealing primarily with General Immunopathology, illuminates the principles which constitute the conceptual basis of immunopathology as a discipline of the biomedical sciences. Discussed here are the mechanisms of immunization and their counterpart, immunologic unresponsiveness; structure of antibodies and principles of genetics pertaining to evolution and polymorphism of the immunoglobins; types of immune reactions and the mode of action of cellular and humoral mediators; and mechanisms of production of cell and tissue damage by immune processes and effector systems. Other chapters deal with experimental immune diseases, homotransplantation in experimental animals, and the effect of drugs on pathogenic immune phenomena.

Volume II, dealing mostly with Clinical Immunopathology, is devoted to discussion of immune reactions in human disease with emphasis on pathogenic reactions.

"The expertise of the authors is uniformly high... their success in succinctly summarizing the facts and theories is considerable... an excellent, concise encyclopedia of the varied topics that constitute the corpus of the hybrid science, immunopathology."—*Arch. of Path.*

THE CURRENT STATUS OF LIQUID SCINTILLATION COUNTING

Edited by

EDWIN D. BRANSOME, JR., M.D.

Associate Professor of Endocrinology and Metabolism, Department of Nutrition and Food Science, Massachusetts Institute of Technology; Instructor in Medicine, Harvard Medical School; Consultant in Internal Medicine and Chief, Endocrine Clinic, Cambridge Hospital; Senior Consultant in Endocrinology, Peter Bent Brigham Hospital

The first truly comprehensive work on this subject to appear in many years, this new book brings together the most recent information on the theory and practice of liquid scintillation counting. The volume is derived from the proceedings of a symposium on the subject held in April, 1969 at the Massachusetts Institute of Technology. Participants included the recognized authorities in the field, and topics discussed were selected to provide a thorough background as well as new information on subjects which were as informative to the novice as well as to the seasoned investigator.

Thoroughly covered are: new information on the physics of the liquid scintillation process, and on the scintillator solute and solvent characteristics; low level counting of nuclides; Cerenkov counting of ¹⁴C and more energetic Bs without phosphor; the physical basis of Chemiluminescence; correction and compensation for quenching; off line data reduction with small disk-top and on-line computers; new information on sample preparation; new methods of sample combustion.

obstetrics and gynecology

Meigs and Sturgis

PROGRESS IN GYNECOLOGY

—Vol. V

Edited by

SOMERS H. STURGIS, M.D.

Clinical Professor of Gynecology, Harvard Medical School; Surgeon (Gynecology), Peter Bent Brinham Hospital, Boston, Massachusetts

MELVIN H. TAYMOR, M.D.

Associate Clinical Professor of Gynecology, Harvard Medical School; Associate in Surgery (Gynecology), Peter Bent Brinham Hospital, Boston

The first volume of this highly acclaimed series was published shortly after the conclusion of World War II as a collection of papers aimed at helping those returning from military service become aware of recent advances in this field. The latest volume appeared in 1963 shortly before the death of its senior editor, Joe V. Meigs, to whom this volume is dedicated. In this long and eagerly awaited Volume V, Dr. Sturgis, his

co-editor Dr. Taymor, and 43 authorities update many of the subjects presented in previous volumes and present new material. The format of earlier volumes has been preserved.

physiology

PHYSIOLOGY OF THE HUMAN KIDNEY

By LAURENCE G. WESSON, JR., M.D.

Professor of Medicine and Head of the Division of Nephrology, The Jefferson Medical College of Philadelphia

In this new work, Dr. Wesson has fused present functional and anatomical knowledge of the kidney into a volume that is complete in its scope and pertinent for all who are concerned with functioning of the kidney and its diseases. This is a major contribution to medical literature that will appeal not only to the physiologist and student but also to the clinician-internist as well as surgeon—who deals with the patient.

In review: "Dr. Wesson has written a lucid, detailed, reference textbook . . . a remarkable achievement. The book represents a rich supply of information."—*J.A.M.A.*

Contents: Anatomy of the Kidney—Metabolism of the Kidney—Dynamics of Renal Blood Flow—Glomerular Filtration—Lymph Flow—Renal Hemodynamics in Physiological and Pathological States—Tubular Transport—Aromatic Acids—Transport of Organic Bases—Tissue-Permeable Weak Acids and Bases—Aliphatic Acids—Sugars—Proteins—Sodium, Chloride, Monovalent Anions—Potassium, Rubidium and Lithium—Bicarbonate Acid and Ammonia—Calcium and Magnesium—Phosphate,

Sulphate and Thiosulfate—Medullary Properties—Excretion of Highly Permeable Substances—Urea and Thiourea—Water—The Renin-Angiotensin System—Erythropoietic Function of the Kidney—Control of Body Water and Electrolyte Balance—Control of Water Excretion—Control of Sodium, Chloride and Potassium Excretion—Control of Calcium and Phosphate Excretion—Permeability of the Ureter and the Urinary Bladder—Renal Function Tests.

THE ANATOMY OF AGING IN MAN AND ANIMAL

By WARREN ANDREW, M.D., Ph.D.

Chairman, Department of Anatomy, Indiana University School of Medicine.

As this title indicates, this forthcoming book deals primarily with changes in the structure of the human and animal body in chronological aging. The text, however, does not deal solely with structural change, but necessarily includes discussions of function, and the activity made possible by the structural-functional relationship.

Contents: THE INVERTEBRATES: Protozoa—Porifera, Coelenterata, Rotifera—Mollusca and Annelida—Arthropoda—Other Phyla. VERTEBRATES OTHER THAN MAMMALS: Fishes—Amphibians—Birds and Reptiles. MAN AND MAMMALS: Introduction—Skin and Fascia—The Skeleton—Muscle Tissue—Blood Vascular System—The Lymphocyte and Lymphoid Tissue—Respiratory System—Digestive System—Urinary System—Reproductive System—Endocrine Organs—Sense Organs—Nervous System.

THE ANATOMY OF THE DEVELOPING LUNG

Edited by

JOHN EMERY, M.D.

Anatomical studies of the lung are extremely difficult undertakings. It is not an organ that lends itself to secluded study in an anatomy laboratory, but necessarily must be investigated by workers in close contact with the living or newly-dead specimen. Appropriately therefore, most of the chapters in this book are authored by pediatricians or pathologists.

In reviewing this book, the *British Medical Journal* says, "the editor, with 10 other contributors, gives an excellent review of the anatomy of the developing lung. The book should be read by all who are concerned with the later stages of human development and with perinatal and immediate postnatal paediatrics. . . . The book can be recommended without reservation."

Contents: Embryogenesis—Postnatal Development of Alveoli—Electron Microscopy in Study of Lung Development—Connective Tissue and Lymphatics—Development of Cartilage—Development of the Mucus-Secreting Elements—Normal Perinatal Circulation—Pulmonary Vasculature in Postnatal Life and Pulmonary Haemodynamics—Arterial Bronchopulmonary Anatomoses—Functional Development of the Human Lung—Weight of the Lungs—Index.

roentgenology

FRONTIERS OF PULMONARY RADIOLOGY

Pathophysiologic, Roentgenographic and Radioisotopic Considerations

Edited by

MORRIS SIMON, M.D.

Associate Clinical Professor of Radiology, Harvard Medical School; Radiologist-in-Chief, Beth Israel Hospital, Boston Massachusetts.

E. JAMES POTCHEN, M.D.

Associate Professor of Radiology, Director, Nuclear Medicine, Edward Mallinckrodt Institute of Radiology, Washington, University, St. Louis.

MARJORIE LE MAY, M.D.

Assistant Clinical Professor of Radiology, Harvard Medical School; Radiologist to Harvard University Health Service, Cambridge, Mass.

Dr. Leo G. Rigler writes in his Foreword: "The title, 'Frontiers in Pulmonary Radiology' expresses well the contents of this vol-

ume. The contributors are all authoritative representatives of the many disciplines— anatomy, physiology, pathology, pulmonary function, chest medicine and surgery, nuclear medicine and roentgenology, which are fundamental to the diagnosis of diseases of the chest.

"The papers in general stress the mechanisms which are responsible for the roentgen and isotopic images of the lungs. The authors have presented new insights into the anatomy of the vascular systems of the lungs, the pathologic physiology and pathology of lung disease, the dynamics of both the circulation and the air passages.

"A section on the future prospects of roentgen and isotopic diagnosis is stimulating, opening avenues for future investigation. Not only radiologists, but chest physicians in general will benefit greatly by careful study of these many interesting and important discussions."

1969 440 pp. 332 illus. \$34.50

NEURORADIOLOGY WORKSHOP

Edited by

LEO M. DAVIDOFF, M.D.

Professor and Chairman Emeritus, Department of Neurosurgery, Albert Einstein College of Medicine; Consultant in Neurosurgery, Montefiore Hospital and Medical Center, Bronx, N.Y.

HAROLD G. JACOBSON, M.D.

Professor of Radiology, Albert Einstein College of Medicine; and Chief, Division of Diagnostic Radiology, Montefiore Hospital and Medical Center.

HENRY M. ZIMMERMAN, M.D.

Professor of Pathology, Albert Einstein College of Medicine, and Chief of Laboratory Division, Montefiore Hospital and Medical Center.

Vol. I: SCALP, SKULL AND MENINGES

In review: "It is excellent, with profuse illustrations and a readability approaching that of a novel . . . a panel of foremost experts, each of whom presents and defends his particular sphere of knowledge . . . an enjoyable and informative text. There will be few . . . who will not gain from the vast experience of the authors and from the book as a general review."—*Radiology*

1961 7½x10¾ 256 pp. 186 illus. \$19.00

Vol. II: INTRACRANIAL TUMORS OTHER THAN MENINGIOMAS

"This book can be highly recommended to students, residents, neuroradiologists, neuropathologists, and neurosurgeons. It represents a dynamic, unorthodox approach to tumors of the central nervous system. . . ."—*J.A.M.A.*

1963 7½x10¾ 406 pp. 349 illus. \$25.50

Vol. III: NON-NEOPLASTIC INTRACRANIAL LESIONS

"Davidoff is one of the last active Cushing-trained neurologic surgeons, and it is well that the four volumes of NEURORADIOLOGY WORKSHOP have recorded for the resident, the student, and the neurosurgeon his wide-ranging views of diagnosis, pathology, and treatment of problems involving the central nervous system."—*Surgery, Gyn. and Obstet.*

1968 7½x10¾ 584 pp. 456 illus. \$35.75

Vol. IV: DISEASES OF THE SPINE

THE HUMAN SPINE IN HEALTH AND DISEASE

—2nd American Edition

By **DR. GEORG SCHMORL**
and **DR. HERBERT JUNGMASS**American edition translated and edited by
E. BESERMANN, M.D.

1970 In press

Schinz ROENTGEN DIAGNOSIS

—2nd American Edition

Edited by

PROF. DR. H. R. SCHINZ, W. E. BAENSCH,
M.D., PROF. DR. W. FROMMHOLD;

PROF. DR. R. GLAUNER,
PROF. DR. E. UEHLINGER,
and PROF. DR. J. WELLAUER

American edition arranged and edited by
LEO G. RIGLER, M.D.

*Professor of Radiology, U.C.L.A. School
of Medicine.*

Volumes I, III, and V of the second American edition of this widely acclaimed book are now available. Part I of Volume IV (which is in 2 parts) will be available mid-1970. Part II is expected for late 1970 publication. Volume II, the last volume to be published, will be available in 1971. When completed this series will represent the most authoritative, complete, and up-to-date analysis of the subject that has ever appeared.

Vol. I: GENERAL PRINCIPLES AND METHODS

"The new edition conveys the unparalleled development of roentgen diagnosis during the past decade . . . a most gratifying achievement."—*J.A.M.A.*

1968 7x10 574 pp. 683 illus. \$55.00

Vol. II: SKELETON AND SOFT TISSUES

In preparation \$55.00

Vol. III: SPINAL COLUMN, SKULL, NERVOUS SYSTEM, EYES, TEMPORAL BONE, PARANASAL SINUSES, TEETH AND JAW, TROPICAL DISEASES

Because of the great advances made in neuro-radiology during the past decade, the space devoted to this subject is nearly twice that of the last edition of the book. The section on Teeth and Jaws is extensive and should be welcomed by radiologists who find it difficult to apply roentgen diagnosis to this portion of anatomy. A chapter on Tropical Medicine is presented by two of the foremost authorities in the field, Drs. W. Peter Cockshott and H. Braband.

1969 7x10 700 pp. 1356 illus. \$55.00

Vol. IV: THORAX

Part 1: THE HEART AND GREAT VESSELS

1970 In press \$55.00

Part 2: PLEURA, MEDIASTINUM AND LUNGS

In press \$55.00

Vol. V. ABDOMEN

"The selection of Dr. Leo G. Rigler to arrange and edit the American edition was most appropriate. Throughout he has provided frequent and pertinent footnotes, which moderate controversial opinions, relate the text to the prevailing radiological and surgical concepts and nomenclature, and supply critical additions from the latest American literature and vast personal experience. The translation is free, smooth and in the American scientific idiom . . . This book should be the primary single volume reference work in the large field of abdominal roentgenology."—*J.A.M.A.*

1967 7x10 844 pp. 1,180 illus. \$55.00

OTORHINOLARYNGOLOGIC RADIOLOGY —3rd Edition

A Radiologic Atlas of Ear, Nose, and Throat Diseases

By DR. RICHARD MITTERMAIER

English edition arranged by Paul W. Hoffman, M.D.

*Department of Otorhinolaryngology and
Maxillofacial Surgery, University of Cincinnati College of Medicine.*

Partial Contents:

Paranasal Sinuses: Examination Technique; Anatomy; Sinus Diseases; Tumors; and Fractures—Oral Cavity and Neck, Including Trachea and Esophagus: Mandible; Salivary Glands; Neck, Larynx, Trachea, and Esophagus—*The Ear:* Examination Technique and Anatomy; Acute Otitis Media; Chronic Otitis Media; Cholesteatoma; Bony Metaplasia; Tumors; and Fractures—Index. ". . . the illustrations are perfectly selected and superbly printed. Numerous line drawings facilitate the reading of many of the roentgenograms . . . This atlas is really a prize volume."—*American Journal of Roentgenology*

1969 415 pp. 694 illus. \$38.50

BORDERLANDS OF THE NORMAL
AND EARLY PATHOLOGIC IN
SKELETAL ROENTGENOLOGY**

—11th Edition

By **PROF. DR. E. A. ZIMMER**English edition translated and edited by
STEFAN P. WILK, M.D.*Director of Radiology, Queen of Angels
Hospital, Los Angeles*

"This book is one of the most important ever published on roentgenology of the skeletal system . . . and outstanding reference for all roentgenologists, orthopedists and pathologists."—*Ann. Int. Med.*

"... one of the most important reference books any roentgenologist or orthopedist can add to his library. It is recommended without reservations."—*Surgery, Gyn., & Obstet.*

"The basic and fundamental importance of the information so completely compiled in this work cannot be overemphasized and makes the book an essential reference work. . . ."—*J.A.M.A.*

"Omniscient."—*Jrl. Bone & Joint Surgery*

"Those who are not familiar (with this bible of radiology) have a rare treat before them."—*Radiology*

And so on. To those who are familiar with this classic, it will be welcome news that it is once again available. The new edition has been thoroughly revised, two new chapters have been added dealing with the differential diagnosis of bone structure and constitutional diseases of the skeleton. Every conceivable condition is dealt with in the minutest detail. The bibliography has been augmented and the number of illustrations increased from 1300 to 1900.

MODERN SURGERY

Edited by

RICHARD H. EGDAHL, M.D.

Professor and Chairman, Department of Surgery, Boston University Medical Center.

JOHN A. MANNICK, M.D.

Professor of Surgery, Boston University Medical Center.

Egdahl and Mannick's revolutionary new text represents an attempt to bring together the best recent literature in a manner that will be most valuable to students, surgical residents, and surgical house officers. In doing so the editors have critically scrutinized the literature and selected ninety-four of what they consider the most pertinent and stimulating articles that have appeared in the recent past and present them here in a manageable fashion. Each article is accompanied by a brief "overview" of the subject written by the author of the original article. The purpose of the "overview" is to bring the subject up to date since the original re-

search was performed. An annotated bibliography, describing the contents and value of the individual references, follows each article.

Because of the rapidity with which new discoveries are being made, new editions of the book will be published every year or two. Included will be new articles in areas where significant advances have been made or, in some cases where better articles have appeared, to replace the old. When articles are retained from the preceding edition, the annotated bibliographies and overviews will be updated.

In their introduction, the editors write, "... If MODERN SURGERY stimulates the interest, discussion and development of critical faculties of medical students, if it increases surgical house officers' and practitioners' awareness of the many high-quality articles in the medical and surgical literature, and if it provides ready access to the topics covered in the excellent articles it contains, we will have accomplished our purpose."

1970 7x10 1224 pp. 393 illus. \$19.75

CHEST INJURIES**Basic Aspects, Diagnosis, and Treatment**

By **EMIL A. NACLERIO, M.D., F.A.C.S., F.C.C.P., F.A.C.C.**

Attending Thoracic Surgeon, Harlem Hospital Center - Columbia University, and Columbus Hospital, New York, N.Y.

This eagerly awaited book, in preparation for several years, is based in large measure upon the 20 years practical clinical experience of the author. Particular stress is given to pathologic physiology with the hope that knowledge of this field will provide the key to understanding both diagnosis and treatment.

The author writes in his preface, "This book is not an exhaustive treatise. The intention is primarily toward brevity, clarity and practicality. Established facts have been emphasized and controversial issues minimized. Thus, the treating physician seeking quick definitive reference may find solutions with a minimum of difficulty."

BODY FLUID REPLACEMENT IN THE SURGICAL PATIENT

A Symposium, 1969

Co-Chairmen:

GABRIEL G. NAHAS, M.D., Ph.D.

CHARLES L. FOX, JR., M.D.

This newly published monograph is the result of a symposium sponsored by the Departments of Surgery and Anesthesiology, College of Physicians and Surgeons, Columbia University in association with The Division of Medical Sciences, National Research Council. The first section deals with Blood Replacement and discusses such problems as the renal effects of hemorrhage, massive blood transfusions, the use of blood in burns, and hemodynamic alterations following massive fluid replacement. The second section is on Colloid Replacement and contains ten chapters on such topics as colloid osmotic pressure, the uses of plasma, dextran, gelatin and albumin in various kinds of situations, and the renal effects of macromolecular substances. Section III, which deals with Water and Electrolyte Replacement, includes chapters on the use of vasopressin in maintaining homostasis in parenteral fluid therapy, extreme hemodilution, fluid therapy in pediatric patients, and prevention and correction of acidosis. Found in Section IV are nine discussions dealing with High Calorie Solutions for parenteral feeding in different types of surgical patients. Contributors to the book represent the leaders in the field. A reading of their high-quality articles should make a substantial contribution to ones' surgical acumen.

HUMAN TRANSPLANTATION

Edited by

FELIX T. RAPAPORT, M.D.

New York University Medical Center

and JEAN DAUSSET, M.D.

University of Paris

In review: "This book, with 57 distinguished contributors, is the latest and most comprehensive account of the biologic developments that form the foundation for present and future application. Although a major emphasis is placed on human application, the experimental background in every area is adequately covered. It is written for the clinician, but the basic scientist in transplantation biology will find inspiration as well as information ... this text is both timely and comprehensive, and is highly recommended."

—*N. Eng. J. of Medicine*

"A scholarly summation of appropriate basic scientific knowledge and clinical accomplishments in a rapidly expanding and altering field ... It is difficult to see how this book can be anything but a valuable reference and 'thought-stimulator' to all physicians and biologists directly and indirectly concerned with any of the multiple aspects of transplantation."—*J.A.M.A.*

PHARMACOLOGICAL, CONVULSIVE AND OTHER SOMATIC TREATMENTS IN PSYCHIATRY

By **LOTHAR B. KALINOWSKY, M.D.**

*Clinical Professor of Psychiatry, New
York Medical College*

HANNIS HIPPIUS, M.D.

*Professor of Psychiatry, Free University,
Berlin*

This monograph deals with all somatic treatments in psychiatry. It grew out of an original book on Shock Treatments by Kalinowsky and Hoch, published in 1946 which, along with subsequent editions, received acclaim as the best and most complete book on the subject. Constant progress and the need for better integration of available treatments encouraged the present authors to rewrite this book. Both clinician and researcher will find here a well organized survey of information on all somatic treatments, including detailed descriptions of the newest drugs now being used in psychiatry. The bibliography and index are extensive.

1969 7x10 512 pp. \$14.75

ACTIVE-PASSIVE

The Crucial Psychological Dimension

By **EDRITA FRIED, Ph.D.**

*Associate Professor of Psychiatry, New
York Medical College; Training Analyst
and Senior Supervisor, Postgraduate Cen-
ter for Mental Health.*

This new book represents yet another significant contribution to modern literature by intellectually dynamic Dr. Edrita Fried. In her treatise Dr. Fried develops a thesis that one of the most basic needs of human life is activeness. People want to use their life, want to expose themselves to new experiences, and strongly desire to act on, and react to, the environment. In developing many of her points, the author strongly challenges the notions of several world famous psychiatrists, including Freud, Cannon, and Ferenczi. A careful reading of this book should be a pleasant and stimulating experience.

THE DYNAMICS OF PERSONALITY

By **LEWIS R. WOLBERG, M.D.**

*Dean and Medical Director, Postgraduate
Center for Mental Health; Clinical Pro-
fessor of Psychiatry, New York Medical
College.*

JOHN P. KILDAHL, Ph.D.

*Faculty, Postgraduate Center for Mental
Health; Director, Program in Pastoral
Psychology, New York Theological Semi-
nary.*

How often have you wished for a down-to-earth book on personal adjustment that you could prescribe for your clients or patients?

Here at last is a practical text, that presents an easy-to-read, yet comprehensive and authoritative account of how personality develops and its role in health and disease. More importantly it describes what people can do to adjust themselves to a troubled world both inside and outside of themselves. While the book is no substitute for psychotherapeutic aid where this is required, it can supplement this help greatly by providing guidelines for personal improvement and bettered relationships with others.

TEACHING PSYCHOTHERAPY OF PSYCHOTIC PATIENTS

By **ELVIN V. SEMRAD, M.D.**

*Director of Psychiatry, Massachusetts
Mental Health Center, Boston, and Pro-
fessor of Psychiatry, Harvard Medical
School*

Editor:

DAVID VAN BUSKIRK, M.D.

*Director, South Shore Mental Health
Center, Quincy, Massachusetts, and As-
sistant Clinical Professor of Psychiatry,
Tufts University School of Medicine*

This monograph, based on a study at the Massachusetts Mental Health Center, is devoted to an exploration of the problems encountered by the first year resident and the resolutions evolved in a major teaching center where residents are supervised in the therapy of psychotic patients from the outset of their training. The authors have attempted to discuss the processes involved and to provide some guidelines for the supervisor.

DOWN'S SYNDROME —2nd EditionBy **CLEMENS BENDA, M.D.**

Formerly: Director of Research and Psychiatry, Walter E. Fernald State School, Waverly, Mass.; The Child's Unit, Metropolitan State Hospital and Wrentham State School, Wrentham, Mass.; Affiliate Professor, Clark University, Worcester, Mass.; Associate Psychiatrist, Mass. General Hospital, Boston, Mass.; Formerly: Lecturer in Pediatrics, Tufts Medical School; Instructor in Neuropsychiatry, Harvard Medical School, Boston, Mass.

The first edition of this book appeared under the title 'The Child With Mongolism'. Of this new edition, Dr. Benda writes: "We may expect . . . that the prevention of Down's Syndrome and a more successful therapy can be developed in the next decades. A vast field of medical research has opened up, a field which is of great importance far beyond the significance of Down's Syndrome itself." The chapters concerned with chromosomes, etiology, prevention, and therapy are all entirely new.

EVOLVING CONCEPTS IN PSYCHIATRY

Edited by

PERRY C. TALKINGTON, M.D.

Psychiatrist-in-Chief, Timberlawn Sanitarium.

CHARLES L. BLOSS, M.D.

Medical Director, Timberlawn Sanitarium.

This newly published book is the result of a seminar commemorating the 50th anniversary of Timberlawn Psychiatric Center, Dallas, Texas. The papers presented here focus on new findings, methods and approaches, directly related to current problems of mental health. Emphasis is placed on significant trends in research and practice which are of contemporary interest and concern. The reader is afforded a representative insight into the very latest approaches to psychiatric problems, in addition to a wealth of practical information and new ideas which may be applied to daily practice.

1969 6x9 176 pp. 27 illus. \$9.75

MENTAL RETARDATION**Approaches to Institutional Change**

Edited by

CHARLES CARR CLELAND
and **JON DAVID SWARTZ**

This collection of brief readings, exercises and case materials related to institutional residents, personnel and operations, reflects the authors' conviction that 'blitz-training' techniques are necessary to pace the rapid growth occurring in the field of mental retardation. A major emphasis is placed on creativity at all levels in fostering improvements through institutional change. The case studies permit the reader to sharpen his analytic and synthetic skills in regard to real and specific problems.

1969 6x9 288 pp. 20 illus. \$12.50

MENTAL RETARDATION

—An Annual Review: Vol. I

Edited by

JOSEPH WORTIS, M.D.

Director of Developmental Services and Studies, Department of Psychiatry, Maimonides Medical Center, Brooklyn, N.Y.

In view of the burgeoning interest and activity in the field of Mental Retardation, this new series will fill the long-felt need for a comprehensive review of developments in the entire field, including both the research and service areas.

In reporting new ideas and investigations as well as hard data and critical analysis, these volumes will represent a rich source of information and guidance for all those concerned with the care and treatment of the mentally retarded.

Over a period of years, some basic topics will be reviewed annually, other topics of timely interest may be covered only once. To enhance the documentary character of the series, each volume will have a retrospective chronicle of important occurrences in the preceding year and a prospective calendar of events scheduled in the current year. The end result will be a definitive, up-to-date reference and working library.

Besides its obvious value to those working in the field, it can be read with benefit by any of the helping professions, especially by the pediatrician who is likely to be the first called upon by the parents for counsel and guidance. Vol. I, 1969 7x10 328 pp. 5 illus. \$19.75
Vol. II, 1970 In preparation

PSYCHIATRY AND THE INTERNIST

Edited by

PAUL J. FINK, M.D.

Associate Professor and Director of Education and Training, Department of Psychiatry, Hahnemann Medical College and Hospital, Philadelphia

WILBUR W. OAKS

Professor and Teaching Coordinator, Department of Medicine, Hahnemann Medical College and Hospital

The Proceedings of a Hahnemann Medical College and Hospital Symposium are presented in this book. It should prove most useful to the internist and beginning practitioner as basic reference, but may also serve as a pleasant review for the seasoned practitioner, psychiatrist, and gynecologist.

Partial contents: Sexual Marital Counseling for the Internist by Martin Goldberg, M.D.—Role of the Obstetrician-Gynecologist in Marital Sexual Counseling by S. Leon Israel, M.D.—Marital and Sexual Counseling by Wilbur W. Oaks, M.D.—The Nature of the Psychiatric Interview by Franklin H. West, M.D.—History Taking and Interviewing by Ephraim T. Lisansky, M.D.—The Psychiatric Needs of the Dying Patient by Herbert M. Adler, M.D.—The Dying Patient by Doris A. Howell, M.D.—Death and the Cancer Patient by Isadore Brodsky, M.D.—The Fear of Death by Paul Jay Fink, M.D.—The Threat of Death by S. Benham Kahn, M.D.—The Suicidal Patient by Robert E. Litman, M.D.

**PRINCIPLES OF INDUSTRIAL
THERAPY FOR THE
MENTALLY ILL**By **BERTRAM J. BLACK, M.S.W.**

Professor of Psychiatry, Albert Einstein College of Medicine; Executive Consultant, Altro Health and Rehabilitation Services; Director of Mental Health Rehabilitation Services, Bronx State Hospital, New York.

"Dr. Black, in his current position as a professor of psychiatry and rehabilitation, has managed to occupy positions in two very important and profound social movements. Both mental health and rehabilitation are social movements based on humanism, pragmatism, and comprehensiveness. Dr. Black's monograph is comprehensive, not only within the usual parameters, but also in its historical background and thorough review of industrial therapy and rehabilitation based on experiences throughout the world. He has also recorded his experiences, put them in perspective, and produced for us a mental health rehabilitation travelogue that both entertains and educates."—From the Foreword by Bertram S. Brown, M.D., *Deputy Director, National Institute of Mental Health.*

Contents: Introduction—European Backgrounds—Industrial Therapy in the United States—The Therapy in Industrial Therapy—The Industrial in Industrial Therapy—Balancing Industry and Therapy—References—Index.

YOUTH**A Transcultural Psychiatric Approach**

Edited by

JULES H. MASSERMAN, M.D.

Presented here are the proceedings of the Fifth Transcultural Conference on Psychiatry in which leading international authorities present diverse and stimulating studies of youth in their respective countries. Each contributor has, in effect, attempted to answer the questions: Is youth a globally pandemic disease, or are its problems endemic and specific to particular cultures? In either case, what, if anything, need to or can be done about its current vagaries and deviations?

1969 6x9 200 pp. illus. \$9.75

PSI AND PSYCHOANALYSISBy **JULE EISENBUD, M.D.**

In this book Dr. Eisenbud systematically explores the application to human behavior of the hypothesis that a person is able to gain and also to communicate information in ways that transcend the usual ways of so doing. After reviewing a great deal of investigative work from which the PSI hypothesis is derived, the author develops the procedural principles in terms of which it can be combined to best advantage with psychoanalytic hypotheses.

Throughout the book emphasis is on the increased clinical and theoretical leverage to be gained from the application of the PSI hypothesis, and what is by the same token lost when it is not entertained and freely deployed. A concluding chapter on The Larger Role of PSI explores puzzling issues and aspects of psychology and the scientific world picture. An extensive bibliography is provided.

PROGRESS IN MENTAL HEALTH

Edited by

HUGH FREEMAN, M.A., B.M., B.Ch(Oxon), D.P.M.

This volume contains a selection from the Proceedings of the Seventh International Congress on Mental Health, held in London during 1968.

The editor writes:

"The main theme of the Congress was mental health education, in its broadest sense, but the present volume is by no means restricted to that topic. One of the most important plenary sessions was on the subject of conflict and the first section here contains four very significant contributions to the study of this overwhelming problem. The next three sections deal with different aspects of education, from the mental health point of view, and these are followed by a section of short papers on more clinical topics. It is hoped that these may represent a fruitful source of ideas and stimulation for workers involved in mental health services."

PROGRESS IN NEUROLOGY AND PSYCHIATRY

—An Annual Review: Vol. XXIV

Edited by

E. A. SPIEGEL, M.D., Dr. Med. (Hon.)

Emeritus Professor and Head of the Department of Experimental Neurology, Temple University School of Medicine

The latest volume of this series, which has become a veritable institution in American scientific literature, lives up to the high standards of excellence set in previous volumes. Surveyed in this volume are Biochemical Aspects of General Neurophysiology, Neuro-Ophthalmology, and Pain and Motor Disorders. This work provides an easy means for both the practitioner and investigator to keep abreast of progress in his specialty and offers a wealth of current information on diagnosis, therapy and basic understanding that can be put to immediate and practical use.

Vol. XXIV, 1970 6x9 552 pp. \$24.75

In review of previous volumes: "... For completeness and serious usage, PROGRESS IN NEUROLOGY AND PSYCHIATRY remains unchallenged."—*Arch. Int. Med.*
"This annual review continues to provide excellent and succinct coverage of recent events ... It should be required reading for all those who want to keep abreast of current developments."—*Dis. Nerv. System*

CURRENT PSYCHIATRIC THERAPIES

—Vol. 10

Edited by

JULES H. MASSERMAN, M.D.

The newest volume of this series follows the tradition of its predecessors in reflecting our currently mounting emphasis on preventive and social orientations and practices.

Vol. 10, 1970 In press

In review of Volume 9 of this series, *J.A.M.A.* says, "The variety of patients treated by psychiatrists and the different methods used may surprise some readers, but not those familiar with earlier volumes in this interesting series. The descriptions by experts of their special methods or fields of interest are brief, clear, and worth reading, not only by psychiatrists but by all physicians interested in helping troubled people."

American Psychopathological Association Publications**THE PSYCHOPATHOLOGY OF ADOLESCENCE —Vol. XXVI**

Edited by

JOSEPH ZUBIN, Ph.D.*Department of Mental Hygiene, State of New York; Department of Psychology, Columbia University***ALFRED M. FREEDMAN, M.D.***Department of Psychiatry, New York Medical College, Flower and Fifth Avenue Hospitals*

The latest volume in this long-standing series, this new book contains the edited proceedings of the fifty-ninth annual meeting of the American Psychopathological Association held in New York City during February, 1969. The first section of the book deals with Ecological Factors in Adolescence, and contains chapters on Revolting Youth—Past and Present, Ethos of Youth and the Adolescent Role, and Is Youth Really Necessary. Among the chapters of the second section, which deals with developmental and learning aspects of adolescence, are: Establishing Motivationally Oriented Educational Environments for Institutionalized Adolescents; Problems of Educational and Vocational Development in Adolescence; Sex Differences in Reaction to Frustration Among Adolescents; and The Problem of Reciprocal Alienation Between the Generations.

NEUROBIOLOGICAL ASPECTS OF PSYCHOPATHOLOGY —Vol. XXV

Edited by

JOSEPH ZUBIN, Ph.D.and **CHARLES SHAGASS, M.D.***Eastern Pennsylvania Psychiatric Institute, Philadelphia*

Presented here are the proceedings of the 58th Annual Meeting of the American Psychopathological Association. The majority of papers presented deal with biological observations that reflect the state of organization of the central nervous system

itself, such as its electrical activity and chemistry. Throughout, there is an attempt to focus more on the brain than on ecological, developmental, or other partly exogenous influences. The conference participants represent the most active investigators in the field and a study of their presentations should make a solid contribution to one's knowledge of this fascinating field.

DISADVANTAGED CHILDREN: Health, Nutrition, and School Failure

By HERBERT G. BIRCH, M.D., Ph.D.
and JOAN DYE GUSSOW

In preparation for over three years, this thoroughly researched volume presents for the first time a cogent and scholarly analysis of the relationship of poverty and educational failure. The authors clearly demonstrate that economic conditions, health, and nutritional status are factors that play a dominant role in determining a child's educational progress. It is stated in no uncertain terms that children who live in poverty live lives which are not merely intellectually depressing but physically destructive. Poor children are exposed to poor food, poor sanitation, poor housing, and poor medical care. The main point of this book is that to be poor in America is to be assailed by a whole range of physical conditions which, by endangering life, growth, and health, depress mental development and educational potential.

LEARNING DISABILITIES**Educational Principles and Practices**By **DORIS L. JOHNSON***Institute for Language Disorders, Northwestern University*and **HELMER R. MYKLEBUST***Professor, Department of Special Education, Northern Illinois University, DeKalb, Illinois*

In review: "Without reservation, *Learning Disabilities* should be required reading for those concerned with the education of children with learning disabilities. As a textbook, it will be most useful at the graduate level in teacher training programs . . ." —*Exceptional Children*

" . . . most elementary teachers will find the many exercises and guidelines extremely useful in their attempts to cope with learning disorders. Likewise, special teachers, school psychologists, and pediatricians will find this text an extremely valuable addition to their libraries . . . The strength of this book lies in the wealth of practical suggestions and exercises available to individuals working with learning disorders. In the preface the authors state . . . that the concepts and materials might be a contribution to better understanding of learning as a process . . ." Toward this end, Johnson and Myklebust have succeeded admirably."

PROGRESS IN LEARNING DISABILITIES —Vol. I

Edited by

HELMER R. MYKLEBUST

This new series is designed to provide a current compilation of opinions and research findings, especially as they relate to psychoneurological studies in childhood. The contributors represent disciplines critical to the early stages of development in this field of study and investigation. Their discussions and research reports will be of interest to educators, psychologists, neurologists, psychiatrists, language pathologists, and others engaged with the child who has good general ability and integrity but who does not learn and achieve in the normal manner.

THE HARD OF HEARING CHILD:**Clinical and Educational Management**

Edited by

FREDERICK S. BERG*Coordinator of Educational Audiology, Utah State University*and **SAMUEL G. FLETCHER***Director, Speech Pathology and Audiology, University of New Mexico*

This book is written for those interested in the education and welfare of the hard of hearing child. It is designed particularly for those who will provide leadership in initiating, implementing and evaluating clinical and educational programs which seek to alleviate disability arising from auditory disorders. The book also has important reference value for clinical centers, school systems and specialists and parents involved in such programs. The many references cited in the book will also enable the serious student in speech pathology, language pathology, audiology, deaf education and psychology to pursue areas of individual interest in his own major field.

LEARNING DISABILITIES**Its Integrity and Usefulness as a****Diagnostic and Treatment Concept**August 1969 Issue of *Seminars in Psychiatry*

Topic Editor:

BURTON BLATT, Ph.D.

Learning Disabilities, the August 1969 issue of *Seminars in Psychiatry*, presents a stimulating and concise summary of what is happening in the field today with emphasis on the problems yet to be resolved. The contributors review theory and practice, discuss dyslexia, learning potential, cognitive controls versus cognitive styles, assessment models, clinical treatment possibilities and pedagogic approaches in dealing with children having "learning disabilities."

ARTICULATION THERAPY AND CONSONANT DRILL BOOKBy **SIDNEY GODA, Ph.D.**

The carefully selected words in this drill book, all at or below the fourth grade reading level, are intended for the speech and hearing clinician or elementary school teacher for use with children who have articulation disorders regardless of etiology and kinds of associated speech problems. In addition, the drill materials are divided into parts of speech so that the child will be able to move immediately beyond the isolated word level to the grammatical use of speech in multiple word phrases and structurally complete sentences. It is hoped that this volume will lessen the task of the speech pathologist who frequently needs to spend considerable time developing word lists and organizing speech materials from many diverse sources.

THE DEVELOPMENT AND DISORDERS OF WRITTEN LANGUAGE —In Two Vols.By **HELMER R. MYKLEBUST**—Vol. I: *The Picture Story Language Test*

1965 6x9 278 pp. 126 illus. \$8.50

TEST MATERIALS

Test pictures, 11 x 14, mounted on heavy cardboard with attached easel, \$4.75

Record forms, 4 pages, 8½x11, packaged 100 to envelope, \$7.50

The Picture Story Language Test, one of the more significant contributions in the field, provides the first standardized test for measuring the development and disorders of written language; the first "achievement test" to indicate growth and maturation of written language in all school children; a tested procedure for use in making a differential diagnosis of mental deficiency, emotional disturbances, reading disabilities, speech defects, deafness, and learning disorders in children; among other applications including its use as a test of literacy and as a test of deterioration as a result of aging. This book will prove of value to the clinical psychologist, psychiatrist, pediatrician, educator, and others working professionally with children.

THE PRIMARY VISUAL MOTOR TEST With Test Materials and Scoring Instructions

By **MARY R. HAWORTH**, Ph.D.

The Primary Visual Motor Test was developed to serve as a tool in assessing visual motor development of the child in the four to eight year old age group, and in evaluating deviations in visual motor functioning during the developmental process and at earlier ages than has previously been possible. Although the test is not to be regarded strictly as an intelligence test, it does provide a standardized measure of relative ability with respect to those skills necessary for manual reproduction of patterns which are visually perceived, and should ideally supplement verbal tests of intelligence.

AN ATLAS FOR THE HUTT ADAPTATION OF THE BENDER-GESTALT TEST

By **MAX L. HUTT**

and **ROBERT GWYN GIBBY**

Professor of Psychology, Virginia Commonwealth University, Richmond, Virginia, and Consultant in Clinical Psychology

It is the authors' aim that this Atlas will provide clear clinical examples of the varied phenomena to be found in the HABGT test records. In this sense it is a supplement to Hutt's basic text (see below) on the projective use of this instrument. It is anticipated that this material will serve to enrich the clinicians awareness of the great variety of test manifestations which are elicited and thus increase the accuracy and sophistication of the psychodiagnostician.

THE RORSCHACH SYSTEMSBy **JOHN E. EXNER, JR., Ph.D.***Bowling Green State University*

This work is devoted to the five American Rorschach systems, each of which—Beck, Klopfer, Hertz, Piotrowski, and Rapaport-Schafer—forms an overlay to the original work of Hermann Rorschach. The contemporary status of the technique is such that a student is ordinarily trained to approach the Rorschach by one system, usually the one which meets the needs and/or biases of his instructor. Thus the student may complete his training with the naive assumption that he has 'learned Rorschach'. The chapters concerned with chromosomes, etiology, prevention, and therapy are entirely new.

HISTORY OF PSYCHOLOGY: An Overview

By HENRYK MISIAK, Ph.D.

Associate Professor of Psychology, Fordham University

and VIRGINIA STAUDT SEXTON, Ph.D.

Associate Professor of Psychology, Hunter College of the City University of New York

A textbook in the history of psychology designed for use on both the undergraduate and graduate levels, this volume is developed from the authors' teaching experience over a twenty year period. The approach is analytical and expository and their plan original and unique. They present an objective overview of the roots of

scientific psychology and of the development of psychology in the principal countries in which it has flourished as a science. The central objective is to record clearly and precisely the theories which have influenced the course of psychological history and the creative impact of those theories upon that history.

A unique feature of this text is the attention it gives to psychological aspects and directions of recent origin which are not treated systematically in other historical texts. Examples are its sections on the development of psychology as a profession, on the approaches of clinical psychology in various parts of the world, and on the phenomenological-existential elements in contemporary psychology.

1966 7x10 512 pp. illus. \$12.50

THE NEW PSYCHOLOGY OF DREAMING

By **RICHARD M. JONES**, Ph.D.

Professor of Psychology, Harvard University

It is anticipated that Jones' dramatic and timely text will have a decisive impact upon anyone who takes dreams seriously, be he therapist, theorist, or experimentalist. The work is comprehensively rooted in past developments, carefully oriented to what is going on now, and discriminatingly discerning about ideas that are apt to germinate more completely in the future. The author organizes here the contributions of a number of people whose ideas developed more or less separately, and in some instances, did not receive wide attention. Jones reevaluates their contributions in light of the great amount of new data now available and integrates the novel insights each has provided. Writing in the foreword, Montague Ullman, M.D. adds, "Here, in something close to the compelling quality of dialogue, Angyal, Erikson, Lowy, Piaget, Hall, Boss, and French rub shoulders with Freud, Jung, Adler and Silberer. Add to this the stimulus to psychoanalytic thought in the contributions of Klein, White and Schachtel, provide a concise and thoughtful review of the current experimental scene, buttressed by the integrative efforts of Dewan, Breger, Snyder and Jones himself, and the reader will have a better idea of the range and comprehensiveness of the present inquiry."

HUMANISTIC PSYCHOLOGY: A Christian Interpretation

By **JOHN A. HAMMES**, Ph.D.

Professor of Psychology, The University of Georgia

The author writes in his preface: "The primary purpose of this book is to present the compatibility of scientifically established psychological truth with the truths proposed by a Christian frame of reference. A secondary purpose is to indicate the necessity for psychology to study not only human behavior but also the variables from which this be-

havior stems, variables that lie within the person . . . The present text is a Christian synthesis of man's origin, purpose, and destiny. It also portrays the compatibility of Christian tradition with science. . . ."

Chapter Headings: Contemporary Man — Evaluations of Human Nature—Absolute and Relative Certitude—Casualty, Intervening Variables, and Hypothetical Constructs—Human Personality—Mind and Brain—Motivation and Reinforcement—Determinism and Human Freedom—Contemporary Anxiety—Healthy Physical, Intellectual Social, and Moral Adjustment—Healthy Emotional Adjustment—The Reality of God—Morality, Conscience, and Sexuality—Suffering and Joy—God and Man—Unity with God—Suggested Readings—Bibliography.

TOWARD A TYPOLOGY OF JUVENILE OFFENDERS: IMPLICATIONS FOR THERAPY AND PREVENTION

By **SHELDON** and **ELEANOR GLUECK**

Harvard Law School

In the past few years there has been increasing concern among criminologists and clinicians about the lack of a typology of delinquents. For several years the authors have been working on a definition of types of delinquents, focusing their attention toward the prevention and treatment of juvenile delinquency. In this volume they present their findings and discuss the meaning and attributes of a "type," present a sampling of typological approaches used in various disciplines concerned with the problems of delinquency, discuss the many problems they have encountered in developing a clinical treatment-typology of young offenders from the wealth of raw material derived from previous researches, and describe the typology arrived at through use of their Social Prediction Table. This volume will surely prove helpful for investigators in the field of typology, for therapists in their day-to-day work with predelinquent and delinquent children and for workers in the field of delinquency prevention.

THE THERAPEUTIC PLAY GROUPBy **MORTIMER SCHIFFER**

Consultant, Board of Education, New York City, Consultant and Member of Graduate faculty of Bank Street College

This new book is a comprehensive and detailed presentation of the principles and practices of an activity-type, experiential form of group therapy which has proved highly successful with emotionally disturbed, pre-pubertal children. In a truly functional manner the author describes the clinical procedures which were developed through experience with more than one hundred therapeutic play groups over a period of several years.

Contents: Principles and Procedures of the Therapeutic Play Group—Therapeutic Play Group Practice—The Play Room—Furnishings and Equipment—Elements of Individual and Group Psychotherapy of Children in Early Latency—Clinical Programs in Schools, with Particular Reference to the Therapeutic Play Group—Analysis of a Therapeutic Play Group in an Elementary School—A Seminar in Child Psychology for Teachers.

THEORY AND PROBLEMS OF CHILD DEVELOPMENT —2nd EditionBy **DAVID P. AUSUBEL, M.D., Ph.D.**

City University of New York

and **EDMUND V. SULLIVAN**

Professor of Applied Psychology, The Ontario Institute for Studies of Education, Toronto, Canada

The long awaited second edition of this highly acclaimed work is now in press and expected to be available in late 1970. It is a complete and comprehensive study that attempts to organize the immense material of child development in a consistent theoretical framework. Ideal as a text for students in psychology and education, this volume will also prove indispensable as a source of reference for clinical child psychologists, educators, and pediatricians.

CHILDREN WITHOUT CHILDHOOD
A Study of Childhood SchizophreniaBy **BENJAMIN B. WOLMAN**

Professor, Doctoral Program in Clinical Psychology, Long Island University; Dean, Institute of Applied Psychoanalysis

The purpose of this book is not to report systematic findings dealing with childhood schizophrenia but to offer an over-all theory based on thirty years experience in hundreds of cases. Available data obtained by scores of workers and the authors' own observations are organized into one coherent system. The author reports that in his studies of families of schizophrenic children an almost uniform pattern developed. Despite the great variability in life histories, the basic features were always the same: parent-parent attitude was hostile-instrumental, mother-child attitude was pseudo-vectorial and actually exploitative-instrumental, father-child attitude was seductive or competitive-instrumental. Thus the establishment of a normal child-parent relationship was prevented.

Contents: The Concept of Schizophrenia—Etiologic Determinants—Schizophrenia in Early Childhood—Schizophrenia in Later Childhood and Adolescence—Preschizophrenic Neuroses—Differential Diagnosis Psychotherapy—Index.

AN INTRODUCTION TO CHILD PSYCHIATRY —2nd EditionBy **STELLA CHESSE, M.D.**

"This second edition of 'An Introduction to Child Psychiatry' is more than an updating of the first, which appeared ten years ago. It also reflects a somewhat different approach to the material . . . I have written a more personal document emphasizing concepts and techniques that I have found productive in my own clinical and research experience."
—Dr. Chess

"There is a very real attempt to survey research methods and highly sophisticated treatment methods in this book. It is an excellently organized text, bringing up-to-date the most active approaches in understanding the many still unclear areas of the psychopathology seen in children."
—Dr. Henry H. Work, in reviewing the First Edition

1969 5½x8½ 272 pages \$6.75

A BEGINNING MANUAL FOR PSYCHOTHERAPISTSBy **ERNEST KRAMER, Ph.D.**

This book is written primarily for the beginning psychotherapist, for the person who will make his professional career to try to help troubled persons through the medium of talking and listening. The author clearly states that not all the answers have been found and that there is still much to be learned about the subject. He does, however, believe that a great deal is known about psychotherapy, and presents here the principles supported by the weight of available research. Throughout the book emphasis is placed on the therapist-patient relationship, especially on the patients perception of it.

Contents: Psychotherapy-Definitions and Goals—Theories and Attitudes—The Setting-Place, Money and Time—The Necessary Patient Perceptions for Therapeutic Personality Change—Technique-The Therapists Responses as Sharing—The Beginning of Psychotherapy—The Openness of the Therapist—Being with the Patient—Respect for the Patient—Concluding Therapy—Emergencies—The Patient's Relatives—Some Neglected Issues.

PROFESSIONAL SCHOOL PSYCHOLOGY —Vol. III

Edited by

GLORIA B. GOTTSEGEN, Ph.D.
 and **MONROE G. GOTTSEGEN, Ph.D.**

Volume III of this highly acclaimed series further examines the field and presents a survey of the evolving trend in contemporary professional effort along with an analysis of the various aspects of the learning process. The book is divided into three sections, the first of which places stress upon the factor of environment. The second deals with learning and concept development, while the third section focuses on the psychodynamics of the learning experience. The contribu-

tions are by experts writing in their particular areas of development.

Vol. III, 1969 6x9 424 pp. illus. \$17.75

journals

BLOOD—The Journal of Hematology

Editor: FREDERICK STOHLMAN, JR., M.D.

This eminent journal is regarded by clinicians and researchers alike as the leader in its field. It is an authoritative and principle source for the latest information on new investigative findings and clinical methods in the broad and expanding field of hematology.

Published monthly: Annual subscription—\$25.00 (\$27.00 outside U.S.A.)

Single issues—\$5.00

COMPREHENSIVE PSYCHIATRY

Official Journal of the American Psychopathological Association

Editor: FRITZ A. FREYHAN, M.D.

This journal provides a forum for clinicians and investigators of markedly divergent concepts, methods and orientations. Clear, concise reports cover new developments in clinical and basic investigations as well as new diagnostic and therapeutic practices.

Published bimonthly: Annual subscription—\$14.00 (\$16.00 outside U.S.A.)

Single issues—\$3.00

JOURNAL OF PEDIATRIC SURGERY

Official Journal of the Surgical Section of the American Academy of Pediatrics and of the British Association of Paediatric Surgeons

Editor: C. EVERETT KOOP, M.D. Associate Editor: STEPHEN L. GANS, M.D.

For the pediatrician, general and special surgeon, and family doctor, this journal is based on the need to improve the surgical care of infants and children, not only through advances in physiology and pathology as well as surgical technic, but also by attention to the unique emotional and physical needs of the young patient. Outstanding original contributions are presented together with a complete international abstracts section and other special departments.

*Published bimonthly: Annual subscription—\$17.50 (\$18.50 outside U.S.A., Canada, Great Britain)
Single issues—\$4.00*

METABOLISM—Clinical and Experimental

Editor: JAMES B. FIELD

Presents clear and practical information on metabolic processes and diseases in the areas of nutrition, endocrines, genetics, dystrophies, diabetes and gout. The Journal features reviews and surveys on the current status of research and practice in specific metabolic disorders, critical evaluations of significant work and applicable conclusions.

*Published monthly: Annual subscription—\$20.00 (\$22.00 outside U.S.A.)
Single issues—\$3.50*

PROGRESS IN CARDIOVASCULAR DISEASES

EDITOR: CHARLES K. FRIEDBERG, M.D.

This journal is far more than a general account of cardiovascular diseases. Through the use of symposium issues, which concentrate on one given phase at a time—and explore it to the fullest—the reader can now keep abreast of the latest clinical work and applied research.

*Published bimonthly: Annual subscription—\$17.50 (\$18.50 outside U.S.A.)
Single issues—\$4.00*

SEMINARS IN HEMATOLOGY

Editors: PETER A. MIESCHER, M.D. and ERNST R. JAFFE, M.D.

A topical journal on subjects of current importance in clinical hematology and related fields, devoted to making the present status of such topics and the results of new investigation readily available to the practicing physician.

*Published quarterly: Annual subscription—\$16.00 (\$17.00 outside U.S.A.)
Single issues—\$5.00*

SEMINARS IN PSYCHIATRY

Editor-in-Chief: MILTON GREENBLATT, M.D.

Associate Editor: ERNEST HARTMANN, M.D.

Each issue of this new publication explores an important area in-depth and includes a thorough investigation of as many facets of a problem as possible. It emphasizes new research findings, innovations in practice, teaching methods and reviews of problem areas.

Published quarterly: Annual subscription—\$12.00 (\$13.00 outside U.S.A.)

Single issues—\$4.00

SEMINARS IN ROENTGENOLOGY

Editor: BENJAMIN FELSON, M.D.

Provides current information on discoveries and investigations that contribute to the general knowledge and have theoretical and practical application in solving problems in clinical practice. Each issue presents the best in modern methodology as practiced by leaders in the science.

Published quarterly: Annual subscription—\$17.50 (\$18.50 outside U.S.A.)

Single issues—\$6.00

TRANSPLANTATION PROCEEDINGS

An Official Journal of the Transplantation Society

Editor: FELIX T. RAPAPORT, M.D.

This new journal provides for the rapid publication of seminars held by the Transplantation Society as well as for in-depth reviews by invited experts of pressing problems in transplantation biology and medicine. It is designed for all those directly or indirectly concerned with this dynamic and expanding field.

Published quarterly: Annual subscription—\$20.00 (\$21.00 outside U.S.A.)

Single issues—\$6.00

New in 1971 ...

SEMINARS IN THERAPEUTICS AND CLINICAL PHARMACOLOGY

Editor: JOSEPH R. DiPALMA, M.D.

This journal will provide for the practicing physician the latest knowledge concerning drugs, how they are most advantageously used and how the maximum safety can be achieved. Each issue will consist of at least 2 review articles; one directed primarily towards the therapy of a syndrome or disease, the other designed to advance the physician's knowledge of basic clinical pharmacology.

Published quarterly: Annual subscription—\$17.50 (\$18.50 outside U.S.A.)

Single issues—\$6.00

New in 1971 ...

SEMINARS IN NUCLEAR MEDICINE

Editors: LEONARD M. FREEMAN, M.D. and M. DONALD BLAUFOX, M.D., Ph.D.

Seminars in Nuclear Medicine is a quarterly periodical devoted primarily to clinical aspects of radionuclide usage. It is meant to provide current concepts to the radiologist, internist, clinical pathologist, and other physicians actively engaged in the performance of various nuclear medicine procedures.

Published quarterly: Annual subscription—\$17.50 (\$18.50 outside U.S.A.)

Single issues—\$6.00

New in 1971 ...

SEMINARS IN ARTHRITIS AND RHEUMATISM

HARCOURT, BRACE & WORLD, INC.

DEPARTMENTS, DIVISIONS, SUBSIDIARIES

THE TRADE DEPARTMENT publishes books of general interest, both hardbound and paperbound, by American and foreign authors. Its list includes fiction, biography, history, criticism, poetry, books on contemporary affairs, and children's books. Its four paperbound lists are Harbinger, Harvest, Voyager, and Harbrace Paperbound Library.

THE COLLEGE DEPARTMENT publishes textbooks, workbooks, teaching tests, tapes, and records for junior colleges, liberal arts colleges, and universities. Its books, both hardbound and paperbound, instruct students in the humanities, history, psychology, sociology, business, economics, the natural and physical sciences, engineering, mathematics, and education.

THE SCHOOL DEPARTMENT publishes learning materials for kindergarten through grade twelve in the fields of English, social studies, science, foreign languages, mathematics, and reading. Its publications include textbooks, teacher's manuals, teaching tests, workbooks, slides, tapes and records, and classroom laboratories. Its Division of Instructional Systems produces computer-assisted instruction (CAI) programs.

THE TEST DEPARTMENT publishes standardized tests for use mainly in schools. These tests are scientific instruments for the measurement of the abilities, aptitudes, and learning achievements of individuals. Its Programs and Services Division prepares and helps to administer school test programs under contract and conducts a test-scoring service.

THE CENTER FOR THE STUDY OF INSTRUCTION (CSI), which is based in the Harcourt, Brace & World Building in San Francisco, is a Division of the Company that conducts research and produces materials for learners on the school level. Its main studies are in social sciences, the humanities, and science.

ACADEMIC PRESS, INC. has editorial offices in New York, London, and San Francisco and publishes scientific books and journals as well as college textbooks. Johnson Reprint Corporation, a part of Academic Press, publishes reprint editions of important works and series in the fields of the humanities and the sciences.

THE DIVISION OF URBAN EDUCATION is devoted to research and publication responsive to the definable needs of city children, especially black children.

GUIDANCE ASSOCIATES of Pleasantville, N.Y., Inc. is a producer of audio-visual materials in the areas of guidance, social studies, biology, mathematics, sex education, and elementary school basal learning disciplines. Its Production Group prepares materials for other companies on a contract basis.

GRUNE & STRATTON, INC., a New York company, is the publisher of medical books and journals. Its more than 700 books in medicine, surgery, and psychology are sold to individuals, libraries, and medical institutions.

THE INSTRUCTOR PUBLICATIONS, INC., in Dansville, New York, publishes *Instructor*, the oldest continuously published periodical for elementary school teachers. Its Curriculum Materials (ICM) Division produces materials to aid teachers with their instruction.

HARBACE PUBLICATIONS, INC., with headquarters in New York, publishes a number of periodicals and directories in various fields of business. It also operates computerized services—Business Periodicals Circulation Services (BPCS) for subscription and subscription fulfillment, and InfoMetrics for market research.

THE HARVEST PUBLISHING COMPANY, in Cleveland, Ohio, publishes five farm magazines, each of which has a long history in its state—*Pennsylvania Farmer*, *Kansas Farmer*, *Missouri Ruralist*, *The Ohio Farmer*, and *Michigan Farmer*—and two business periodicals.

NEBRASKA FARMER COMPANY, in Lincoln, Nebraska, publishes two farm magazines. *Nebraska Farmer*, founded in 1859, goes to more than 90 per cent of the farm families in its state. *Colorado Rancher and Farmer* is the main local agricultural periodical in its state.

LONGMAN CANADA LIMITED, a publishing house of which Harcourt, Brace & World is the majority owner, is based in Toronto. It publishes textbooks and other learning materials in grades K to 13 for Canadian schools, as well as college textbooks and general (fiction and nonfiction) books. It acts as Canadian representative for a number of American and British publishers, notably Penguin Books.

DANSVILLE PRESS, INC. and Davidson Printing Company are printing and binding companies owned by Harcourt, Brace & World, Inc. whose capacity is geared to periodicals and catalogs.

THE PSYCHOLOGICAL CORPORATION, a New York company, is engaged in the applications of psychology to the problems of industry, government, and education. Its Industrial Division provides services in the evaluation of managerial talent, employee attitudes, and interviewer training; its Professional Examinations Division conducts large-scale testing programs, including Medical College Admissions, Examinations for NYSE Registered Representatives; and its Test Division publishes tests for use by psychologists, clinics, guidance counselors, and industry.
